## **Sample description**

The sample to be tested consists in a constructive structure called "SUN BALLAST". It is made by two concrete blocks which are shaped in order to support and to ballast photovoltaic panels. The single photovoltaic panel it is fitted by means of metal fasteners (two for each side) to a couple of SUN BALLAST elements that do not need any further fixing device to a base (for instance roof). The SUN BALLAST elements are realized according several geometries in order to get different exposition angles for the photovoltaic panels. The test report attains to tests completed for the types: 0°, 0°K, 3°, 3°K, 5°, 5°.2, 5°.3, 5°.4, 5°.5, 5°.6, 8°, 10°, 10°60kg, 11°K, 11°, 11°.2, 11°.3, 15°, 20°, 30°, 30°.1, 35°. The nominal dimension of the photovoltaic panels used in the tests are: 165cm x100cm.

## **Installation in the wind tunnel**

The samples had been installed on a wooden rigid plane 2.5mx2.5m; between the concrete base of the SUNBALLAST elements and the test base it has been installed a bituminous girdle.

Configuration "Wind direction"

Configuration "Against the wind"

## Test Method

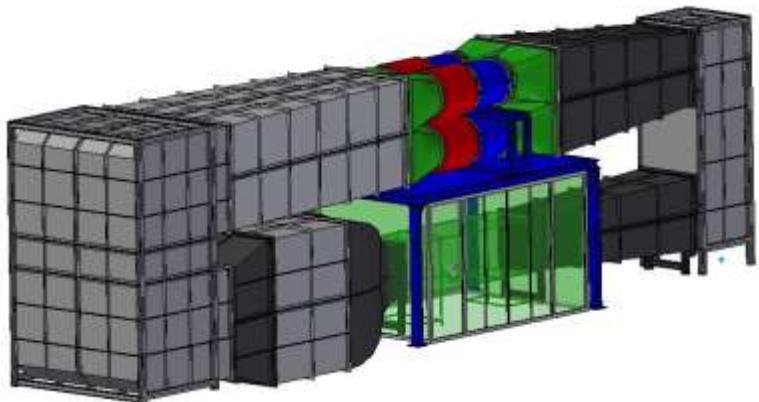

### Scope

The tests had been completed in the wind tunnel installed in Newton Laboratory with the aim of exposing the "SUN BALLAST" constructive system and the installed photovoltaic panel to a normalized air flowstream.

The test is finalized to the study of possible breakings, Slippings, liftings, flipping over following the wind action.

### Newton wind tunnel

The test is finalized to the study of possible breakings, Slippings, liftings, flipping over following the wind action.

The test facility has been built to run with either an open or closed test section, as needed for particular experimental program. The required electric energy required is produced by mean of a power generator fully integrated with the wind tunnel. The total power available is 300 kWatts. The wind tunnel is a single return closed circuit (Gottingen type) with a rectangular air path perimeter along centreline of 56m. The overall dimensions are 27m long, 4,5m wide, 8m high. The construction material is steel. In the curves of the wind tunnel corner vents (turning vanes) are installed. In the settling chambers n. 2 screens and n. 1 honeycomb wall are installed to uniform the speed and reduce the turbulence. Dynamic pressure variation across the jet The speed uniformity across the test section is checked realtime. On the end of the cross section of the nozzle n. 4 pitot tubes are installed according ISO5801. The variation of the speed on the end of the cross section of the nozzle does not exceed 0,5 %. Longitudinal Pressure Gradient The longitudinal variation of the speed along the test area is measured realtime: end of the cross section of the nozzle n. 4 pitot tubes installed according ISO5801 along the test chamber on the longital upper frame a pitot tube is permanently installed: additional pitot tube may be installed on demand at the beginning of the diffuser a pitot tube is installed and it is aligned with the upmost at the nozzle. The procedure used to measure the dynamic pressure variation across the jet allows to map the longitudinal pressure gradient by moving the equipment along the direction of the free stream. As reference: with the wind tunnel in the open configuration with a speed equal to 30 m/s along 5m the speed stays within 1% of variation respect to the mean (measured at the centre of the chamber) from 0,8 m to 4,2 m.

**The test section used for the tests is 1,5m x 1,5 m**

### **Analis of the test results**

#### **Laboratory condition on the 21-11-2016**

- Temperature: 21°C, UR: 42%
- Air density: 1,17 kg/m<sup>3</sup>

<b>ID prova</b>	<b>30</b>

**Descrizione campione**

<b>Angolo zavorra</b>	<b>11°</b>
orientamento	orizzontale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 85 km/h**

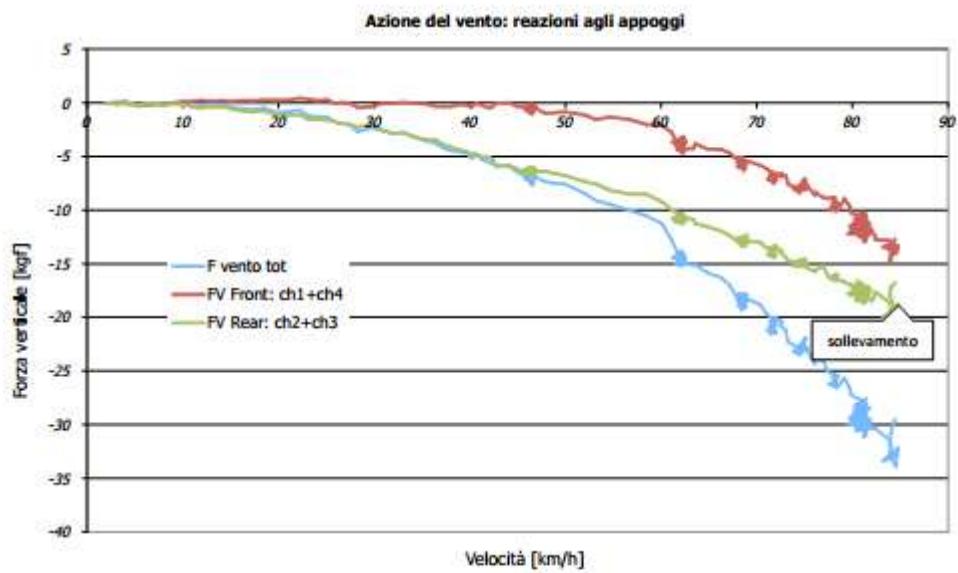

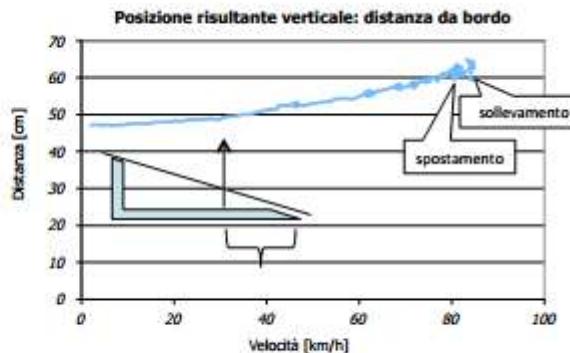

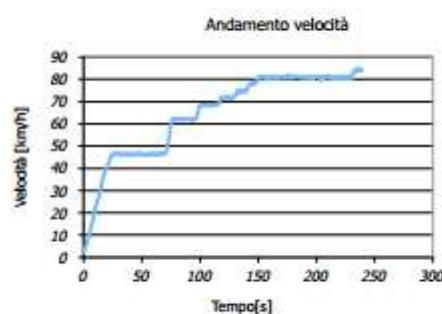

min. velocità spostamento [km/h]	<b>80</b>
min. velocità sollevamento [km/h]	<b>84</b>

Notification n. 4556@30.xlsx

**Note**

-

Il presente rapporto non può essere riprodotto parzialmente senza l'autorizzazione scritta del direttore del laboratorio  
 I risultati riportati attengono esclusivamente ai campioni verificati nel corso della prova.

## ID 34: Model 11°K Horizontal + 1 Unit + 2 Ballasts

**Newton (Milan - Italy)**  
**Notifica dei risultati**

Notification n. 4556@31.xlsx

Data	13/07/15
Sessione di prova	4556
ID prova	31

**Descrizione campione**

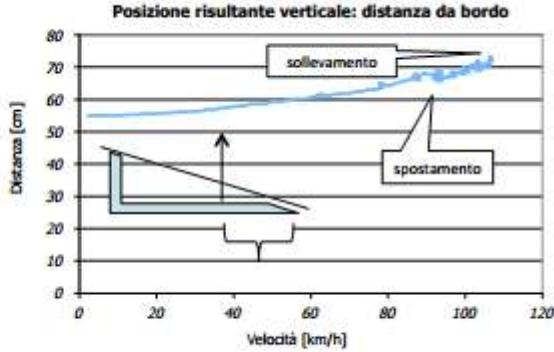

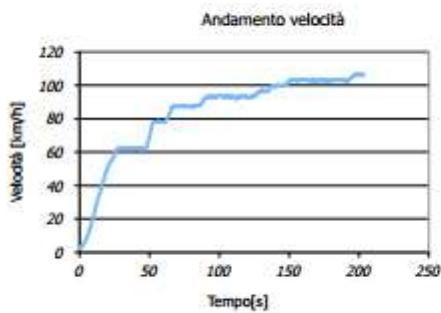

<b>Angolo zavorra</b>	<b>11°K</b>
orientamento	orizzontale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 107 km/h**

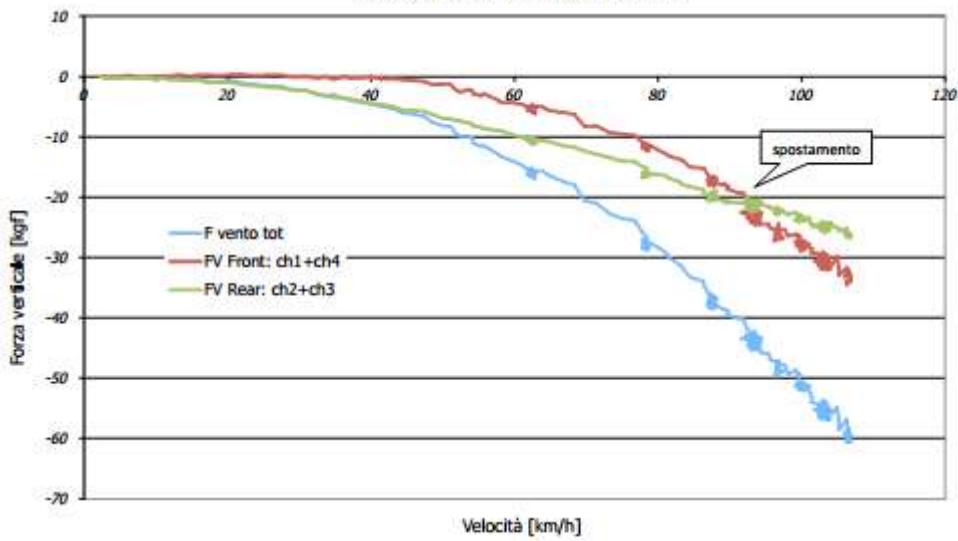

min. velocità spostamento [km/h]	<b>93</b>
min. velocità sollevamento [km/h]	<b>106</b>

**Note**

-

**Azione del vento: reazioni agli appoggi**

Il presente rapporto non può essere riprodotto parzialmente senza l'autorizzazione scritta del direttore del laboratorio  
 I risultati riportati attengono esclusivamente ai campioni verificati nel corso della prova.

## ID 35: Model 11°.2 Horizontal + 1 Unit + 2 Ballasts

**Newton (Milan - Italy)**  
**Notifica dei risultati**

Data	14/07/15
Sessione di prova	4556
ID prova	<b>62</b>

**Descrizione campione**

<b>Angolo zavorra</b>	<b>11°.2</b>
orientamento	orizzontale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 93 km/h**

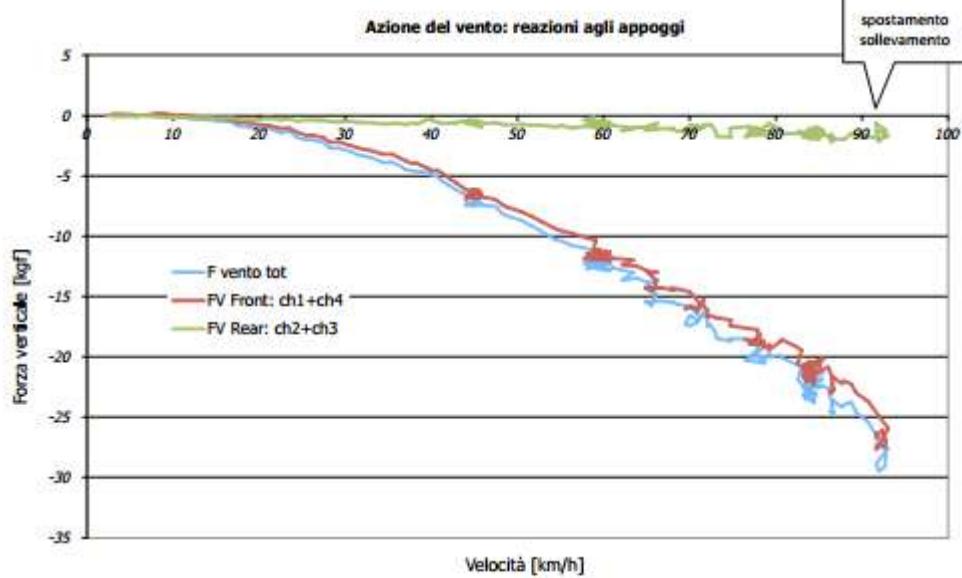

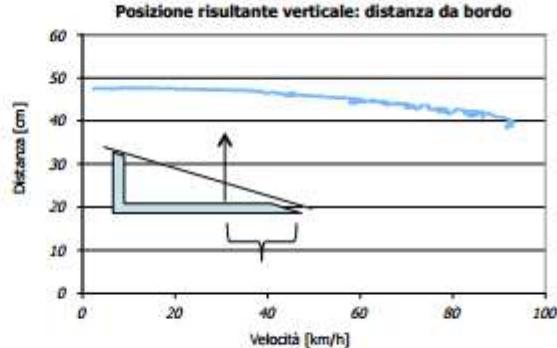

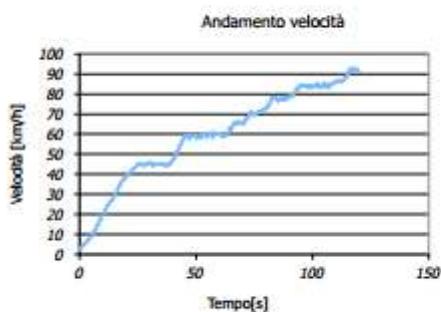

min. velocità spostamento [km/h]	<b>92</b>
min. velocità sollevamento [km/h]	<b>92</b>

Notification n. 4556@62.xlsx

**Note**

-

## ID 36: Model 11°.3 Horizontal + 1 Unit + 2 Ballasts

**Newton (Milan - Italy)**  
**Notifica dei risultati**

Data	14/07/15
Sessione di prova	4556
ID prova	65

**Descrizione campione**

<b>Angolo zavorra</b>	<b>11°.3</b>
orientamento	orizzontale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 109 km/h**

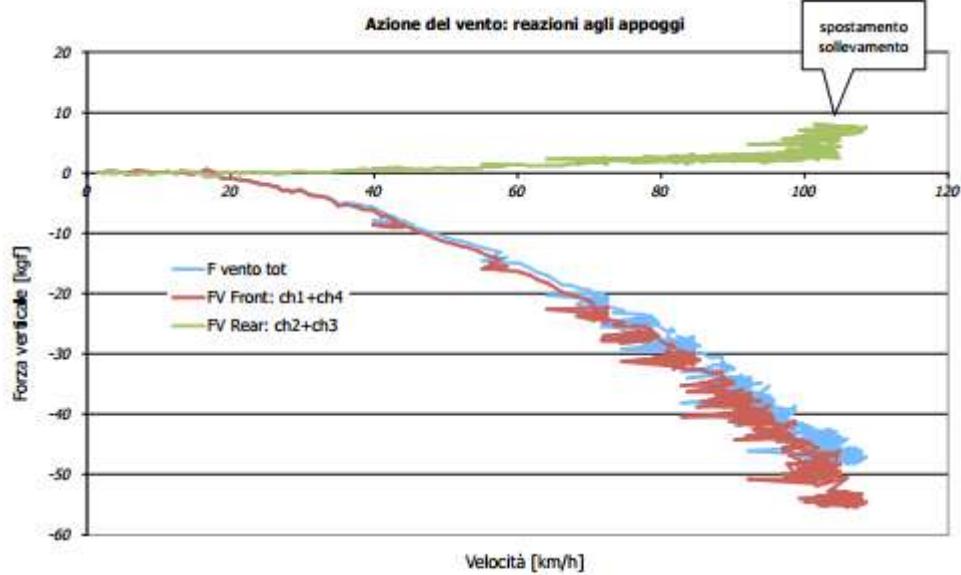

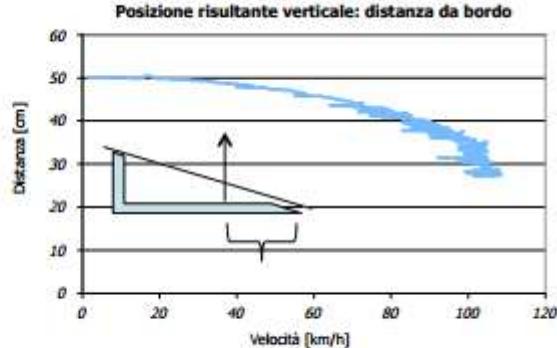

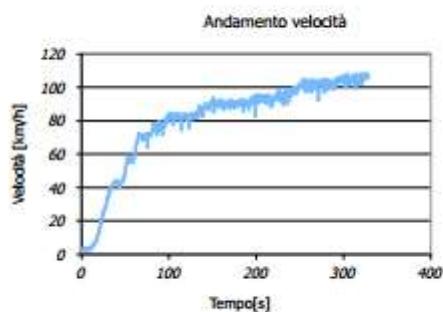

min. velocità spostamento [km/h]	<b>102</b>
min. velocità sollevamento [km/h]	<b>107</b>

Notification n. 4556@65.xlsx

**Note**

-

**ID 37: Model 11° "Sail" Configuration with accessory plate to joint ballasts**

ID	Model	Positioning	Wind direction	Shed	Speed Slipping
37	11°	Sail	A against the wind	/	104 km/h

**ID 38: Model 11° "Sail" Configuration 2/3 with accessory plate to joint ballasts**

ID	Model	Positioning	Wind direction	Shed	Speed Slipping
38	11°	Sail 2/3	A against the wind	/	112 km/h

## ID 39: Model 15° Horizontal + 1 Unit + 2 Ballasts

**Newton (Milan - Italy)**  
**Notifica dei risultati**

Data	13/07/15
Sessione di prova	4556
ID prova	35

**Descrizione campione**

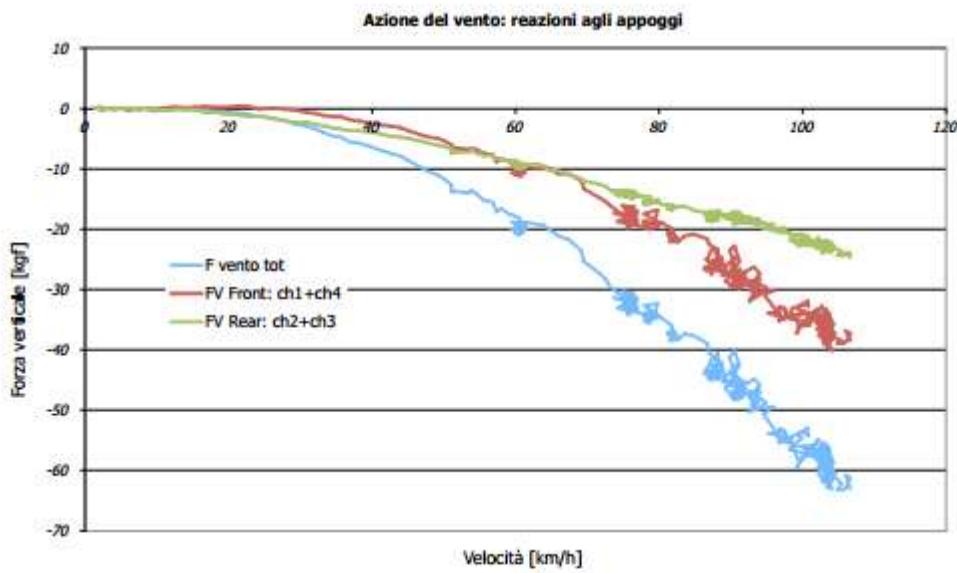

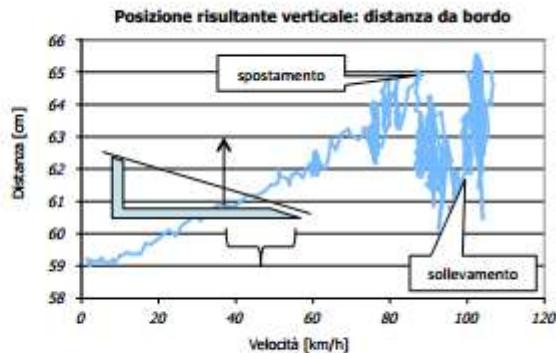

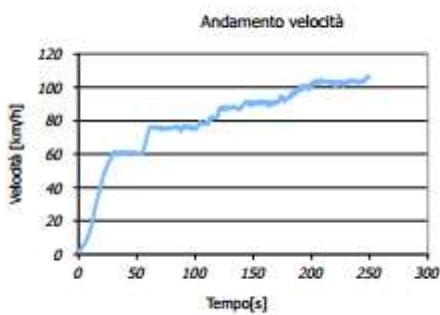

<b>Angolo zavorra</b>	<b>15°</b>
orientamento	orizzontale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 107 km/h**

min. velocità spostamento [km/h]	<b>88</b>
min. velocità sollevamento [km/h]	<b>105</b>

**Note**

-

Il presente rapporto non può essere riprodotto parzialmente senza l'autorizzazione scritta del direttore del laboratorio  
 I risultati riportati attengono esclusivamente ai campioni verificati nel corso della prova.

## ID 40: Model 15° Vertical + 1 Unit + 2 Ballasts

**Newton (Milan - Italy)**  
**Notifica dei risultati**

Data	14/07/15
Sessione di prova	4556
ID prova	58

**Descrizione campione**

<b>Angolo zavorra</b>	<b>15°</b>
orientamento	verticale
n° moduli	1
n° zavorre	2
conf. Zavorre	-
barra	NO
carter frangivento	NO

**Risultati per prova con velocità massima 96 km/h**

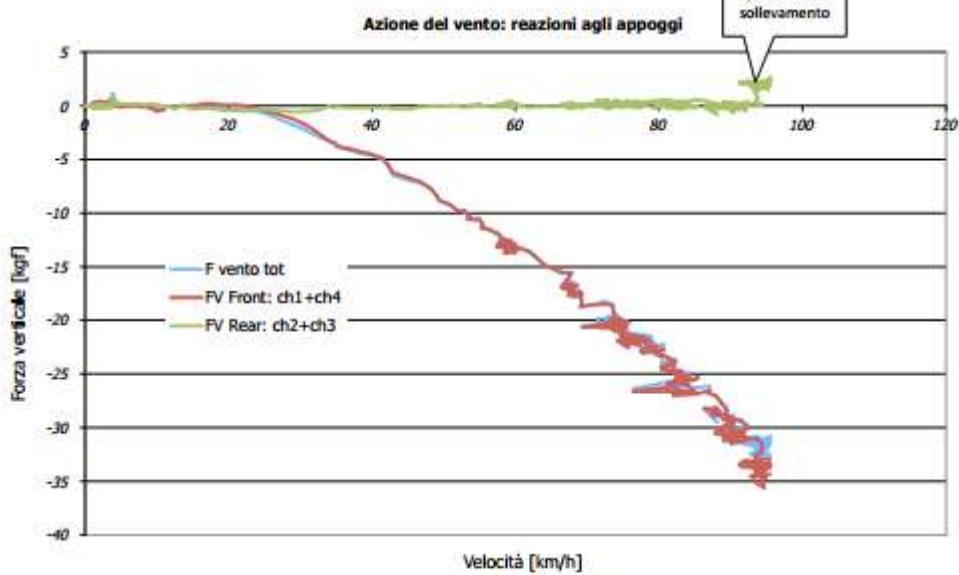

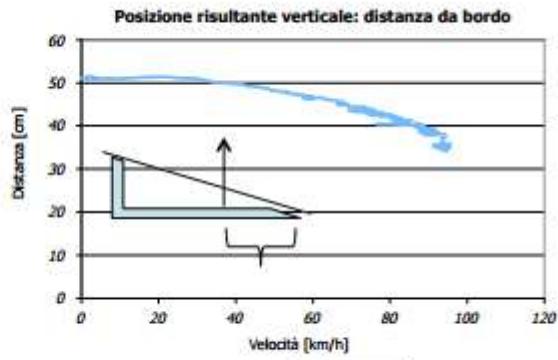

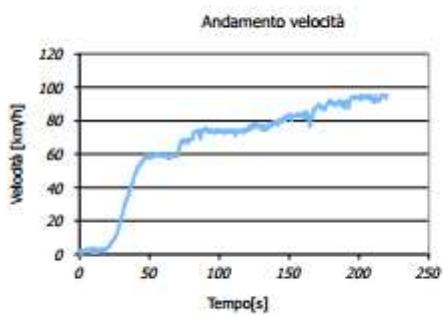

min. velocità spostamento [km/h]	<b>95</b>
min. velocità sollevamento [km/h]	<b>95</b>

Notification n. 4556@58.xlsx

**Note**
